5.5 inch loss in  
4 treatments

## Redefine your design with up to 60% destruction of fat cells in one area!

**Many people struggle** to lose their belly fat primarily through working out and eating healthy. Our revolutionary, non-invasive system is designed to selectively deliver energy to fat and eliminate fat cells with virtually no risk of overheating muscles or internal organs. The treatment causes the natural death of fat cells (Apoptosis), as proven by scientific research—no pain, surgery, or discomfort. It feels like a hot tub or a heating pad as the underlying fat is heated to 120 to 125 degrees, hot enough to destroy fat cells.

You may begin to see immediate improvement just days after your treatment. However, you will see greater results two weeks after your treatment with continued results as your body rids itself of fat cells. Diet and exercise are not required to see results. The only thing necessary is to maintain proper hydration the day before, the day of, and the day after treatment.
